Safety nets for construction sites

Safety net Type S

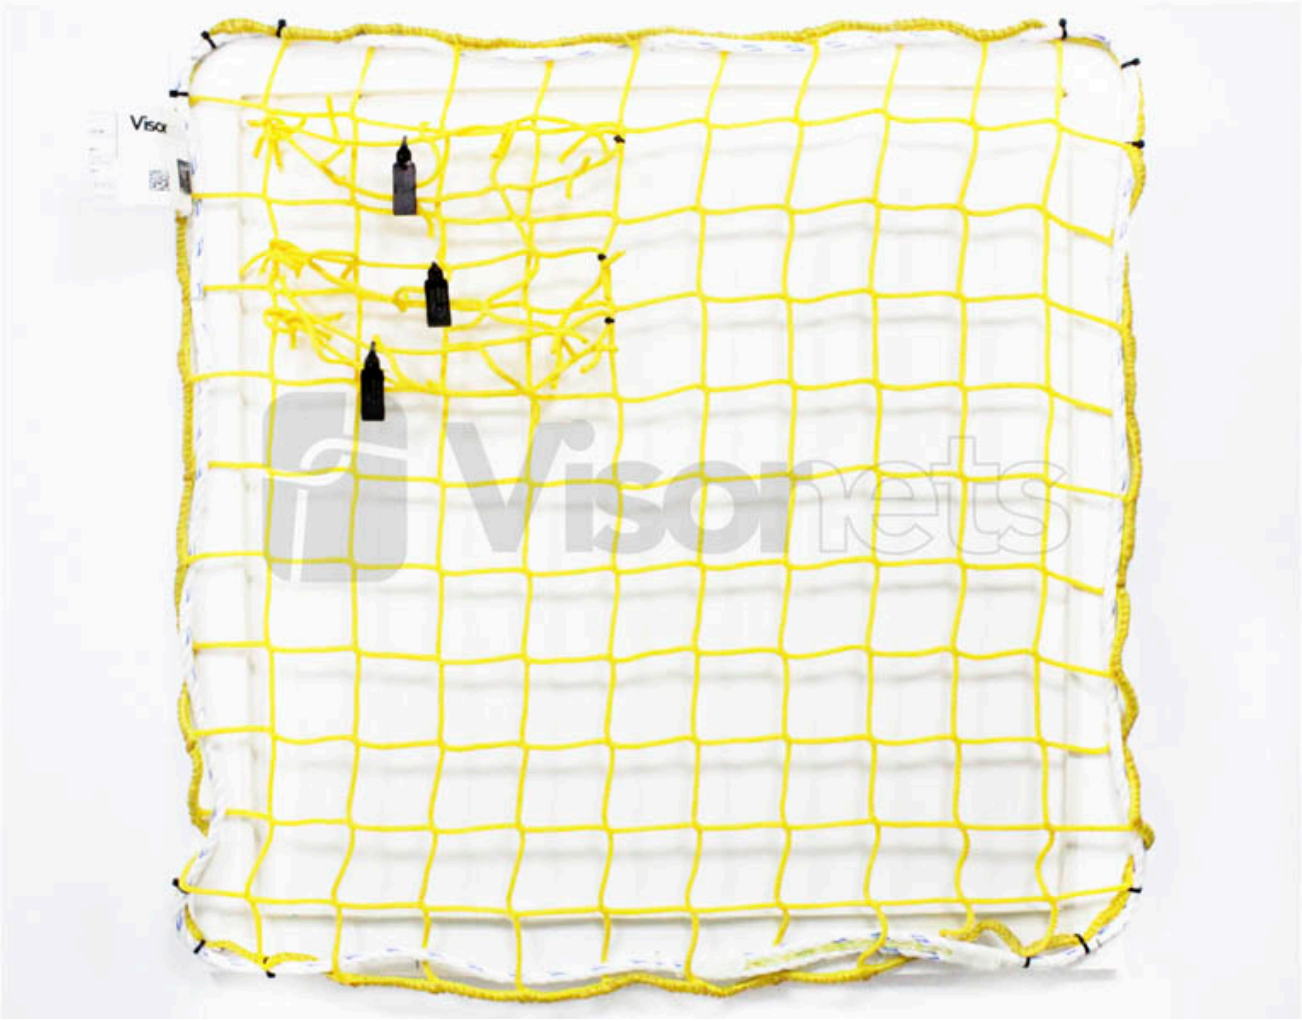

This kind of safety net has a rope as a border and it is used in horizontal places, such as metal structures in industrial buildings, skylights, inner courtyards or building gaps. You can use this type of safety net on sites such as bridges, viaducts, flyovers of civil works.

Like all of our safety nets, Type S is made of high tenacity nylon/polyamide or polypropylene, both with anti **UV treatment**.

If you need more information, you can contact to our Sales Departament at

Safety net Type U

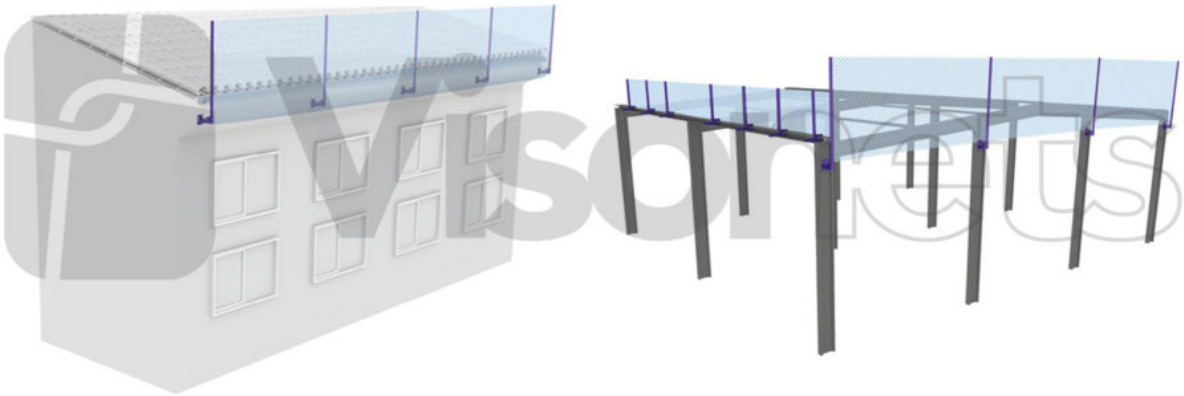

The safety net Type U is a system attached to supporting framework for a vertical use. The vertical poles, railings and nets compose a protection system according to the standard EN 13374 class C for temporary edge protection systems.

This system is certified in the event of working on **sloping roofs >10º**. It has different applications, such as for the **photovoltaic industry** and **protection for bridges and viaducts**.

For more information about this system, you can contact us.

SAFETY NET TYPE U
CERTIFIED SYSTEM

Safety net type V

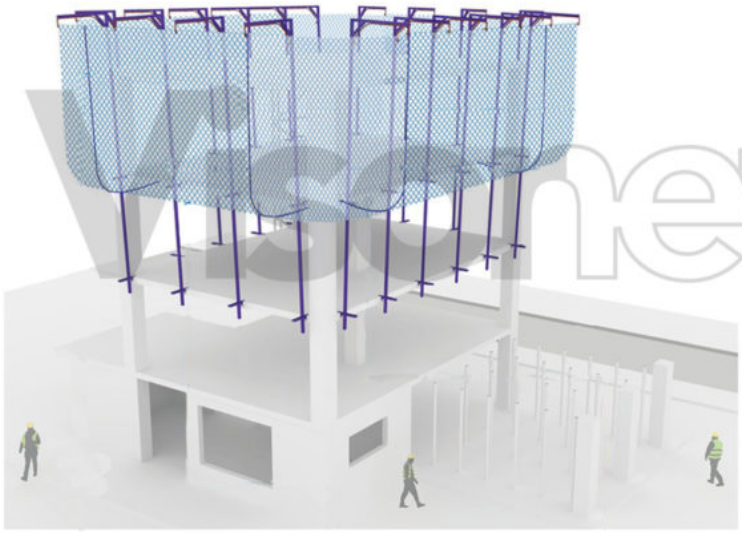

Visornets, as construction safety nets provider, has designed its type V safety net system. This system consists in a safety net with border rope attached to a gallow as a support. The goal of this system is to **lessen the effects of falling** person and/or **avoid falling objects in personnel transit areas** inside work or on public roads.

The mesh size is 100 mm. There is no problem **combining this main network with a debris mesh**, which acts as a windbreaker, an important point in construction sites with certain wind conditions.

You can request more info about this system to Visornets' Sales Department, at international@visornets.com.

Protective nets

Vertical nets

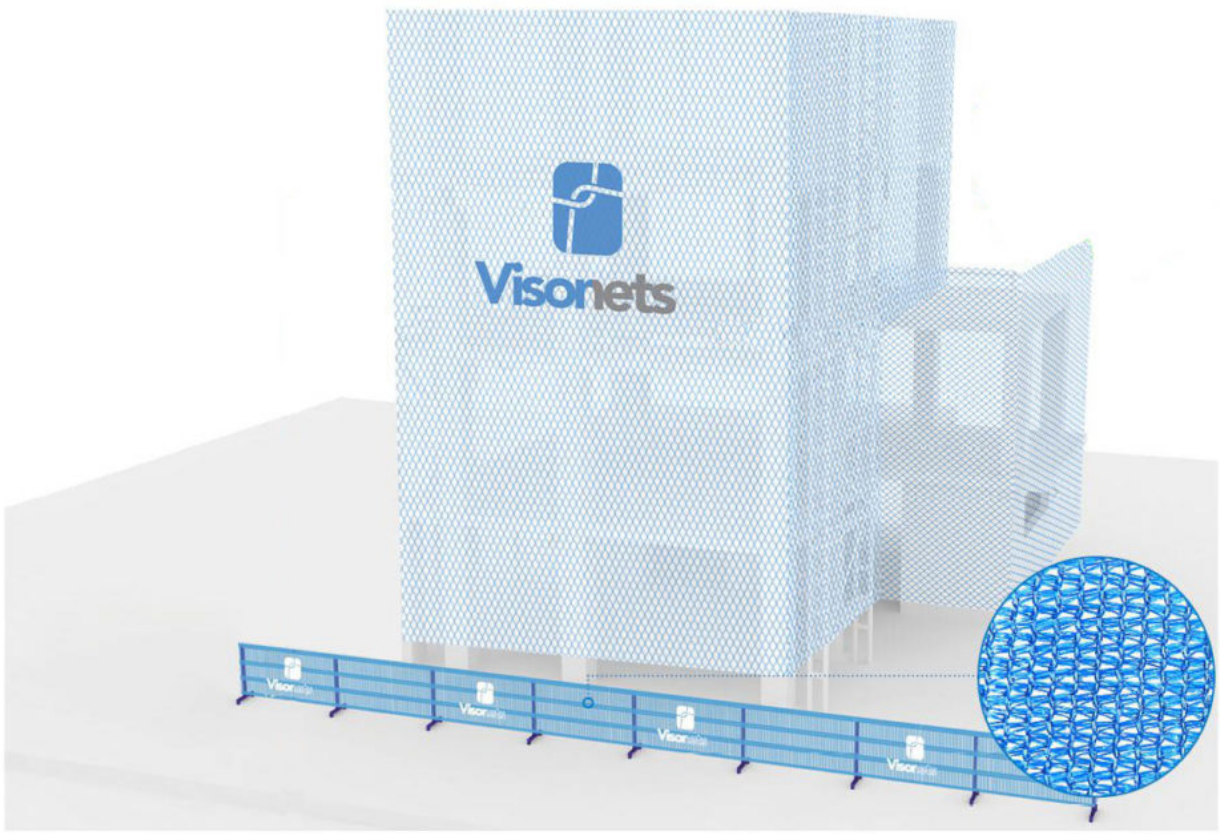

Visornets, as a contruction safety net suppliers, also supplies protective nets, such as vertical nets. This system does **not stop workers or objets falls, it prevents them**.

This certified system can use when the floors are not cased yet, and nets can stay in place right up to the installation of the windows. Moreover, it is a **useful system for protecting stairs wells or elevator shafts**, among others.

With this net, we can add another lay, especifically a debris mesh, to avoid the fall of

particles.

Formwork safety system

This system protects from falls at different levels during the implementation of the **formwork**.

Thus, Visor Fall Arrest Nets has two types of under structure nets: non-reusables (Class A) and reusables under structure protection nets (Class B). ***Class A*** are made for installations in forged type beam – slab. Contrary, ***Class B*** are installed with steel anchoring elements directily to the strut, they are available in different sizes.

If you have any doubt, you can consult our Sales Department at the email international@visornets.com.

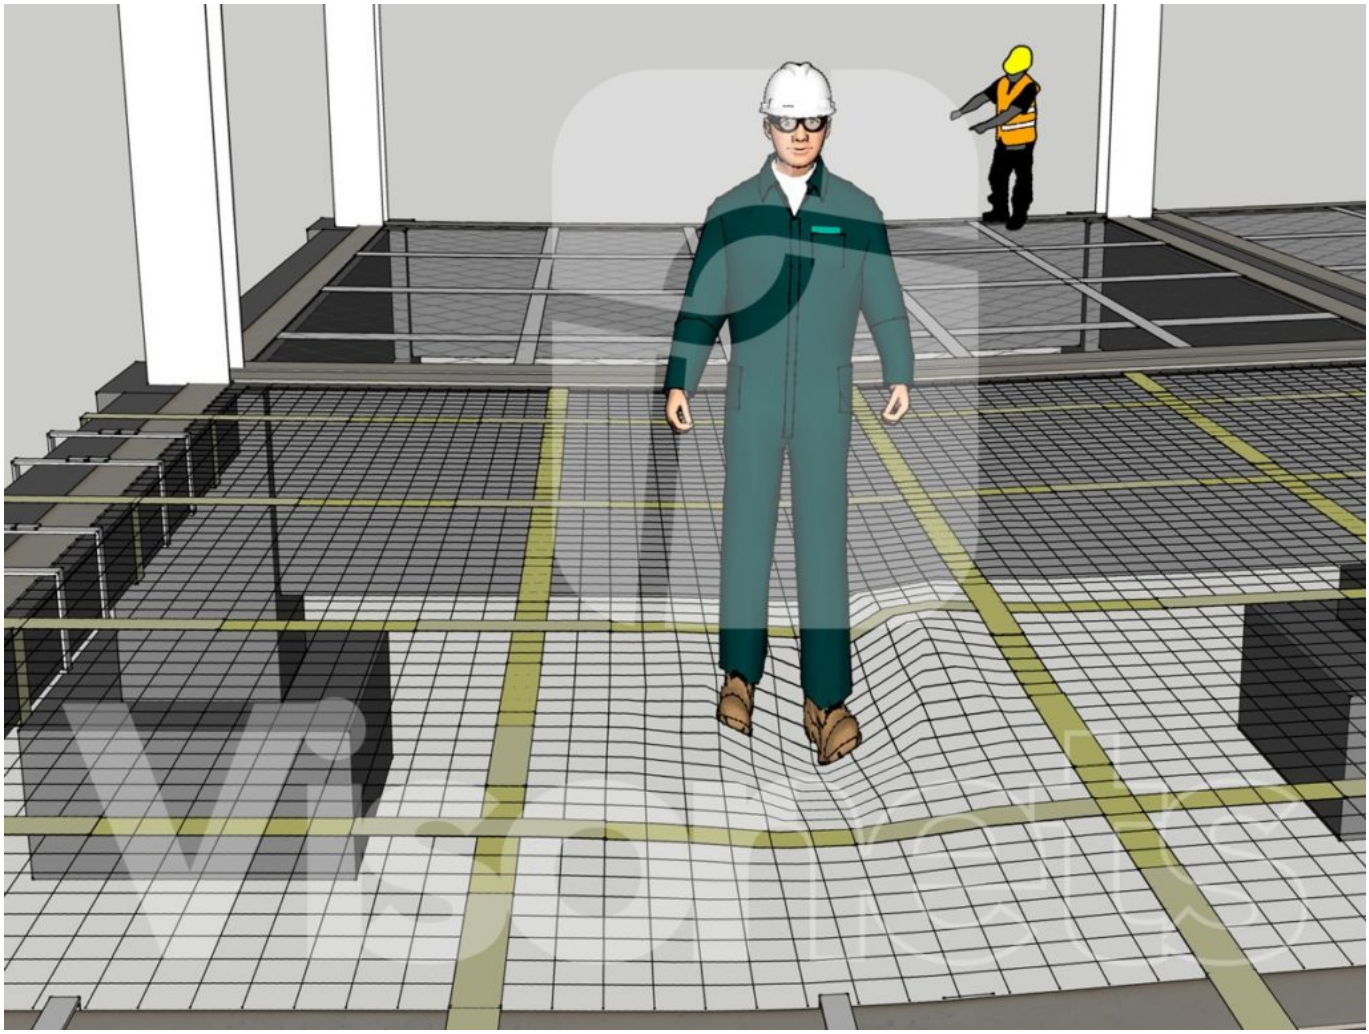

Walk-on-nets

That is a system, that has had a so fast increament, is a perfect way to access to hard areas, avoiding other solutions such as scaffolding or Mobile Elevating Work Platforms (MEWP).

Moreover, the Walk-on-nets or Tensioned Access Platfom (TAP), with an adequate system edge protection, can be combined with debris meshes. That double lay make possible to carry out work independently of the activities carried out at lower levels.

If this system interests you, at Visornets, as a construction safety nets supplier, we can provide it. Ask for more information at international@visornets.com
